anti-rat CD161 NK-Cells (NKR-P1)

Monoclonal Antibody 10-78 to CD161 (Rat)

Cat-No: LT11615132G  100 µg in 100 µl

Clone: 10-78

Specificity: This anti-rat NK cell monoclonal antibody recognizes a 60 kDa disulfide linked homodimer known as NKR-P1. This type II transmembrane glycoprotein is found on rat NK cells and large granular lymphocytes. This antibody is suitable for flow cytometry. It is also reported to work with frozen sections.

Isotype subclass: Mouse IgG1

Form: purified

Physical state: Liquid

Buffer/Additives/Preservative: PBS containing 1 % BSA and 0.09 % sodium azide (pH 7.2).

Expiration date: The reagent is stable until the expiry date stated on the vial label.

Storage conditions: For long term storage, aliquot and freeze unused portion at –20°C in volumes appropriate for single usage. Avoid freeze/thaw cycles.

Application: Flow Cytometry

Warning: Sodium azide is harmful if swallowed (R22). Keep out of reach of children (S2). Keep away from food, drink, and animal feedingstuff (S13). Wear suitable protective clothing (S36). If swallowed, seek medical advice immediately and show this container or label (S46). Contact with acids liberates very toxic gas (R32). Azide compounds should be flushed with large volumes of water during disposal to avoid deposits in lead or copper plumbing where explosive conditions can develop.
