

## DDIT3/CCP12 Tri-color Break Apart FISH Probe Kit

### Introduction

The DDIT3/CCP12 Tri-color Break Apart FISH Probe Kit is designed to detect rearrangements in the human *DDIT3* gene, located on chromosome band 12q13.3, along with the number of chromosome 12 copies per cell. In addition to revealing breaks, which can lead to translocation of parts of the gene, inversion, or its fusion to other genes, the probe set can also be used to identify other *DDIT3* aberrations such as deletions or amplifications. Rearrangements and abnormal expression of the *DDIT3* gene – also known as *CHOP*, *CEBPZ*, *CHOP10*, *CHOP-10* or *GADD153* – have been observed in myxoid liposarcoma and other malignancies.

### Intended Use

To detect rearrangements in the human *DDIT3* gene located on chromosome band 12q13.3.

### Cont.

LSP DDIT3 5' FISH Probe  
LSP DDIT3 3' FISH Probe  
CCP12 FISH Probe

### Color

CytoGreen  
CytoOrange  
CytoAqua

### Probe Design

Not to Scale

LSP DDIT3 5' FISH Probe covers some genomic sequences adjacent to the 5' end of the *DDIT3* gene. LSP DDIT3 3' FISH Probe covers some sequence downstream of the 3' end of the gene. The two probes are flanking sequences across the *DDIT3* gene in which variable breakpoints have been observed. CCP12 FISH Probe, derived from chromosome 12-specific alpha satellite DNA, is designed to serve as a control to determine the number of chromosome 12 copies per cell.

### Cat. No.

CT-PAC058-10-GOA

### Volume

10 Tests (100 µL)

### Signal Pattern Interpretation

#### Normal Pattern

2O + 2G + 2A\*

#### Abnormal Pattern

Other Patterns

\*Overlapping orange and green signals can appear as yellow.
