

SS18 Break Apart FISH Probe Kit

Introduction

The SS18 Break Apart FISH Probe Kit is designed to detect rearrangements in the human *SS18* gene located on chromosome band 18q11.2. In addition to revealing breaks, which can lead to translocation of parts of the gene, inversion, or its fusion to other genes, the probe set can also be used to identify other *SS18* aberrations such as deletions or amplifications. Abnormal expression of the *SS18* gene – also known as *SYT* or *SSXT* – has been observed in synovial sarcoma and other cancer types.

Intended Use

To detect rearrangements in the human *SS18* gene located on chromosome band 18q11.2.

Cont.

LSP SS18 5' FISH Probe
LSP SS18 3' FISH Probe

Color

CytoOrange
CytoGreen

Probe Design

Not to Scale

LSP SS18 5' FISH Probe covers the 5' (start) portion of the *SS18* gene and some adjacent genomic sequences. LSP SS18 3' FISH Probe covers the 3' (end) part as well as sequences downstream of the gene. The two probes are flanking sequences across the *SS18* gene in which variable breakpoints have been observed.

Cat. No.

CT-PAC082-10-OG

Volume

10 Tests (100 µL)

Signal Pattern Interpretation

Normal Pattern

2OG*

Abnormal Pattern

Other Patterns

*Overlapping orange and green signals can appear as yellow.
