

KRAS/CCP12 FISH Probe Kit

Introduction

The KRAS/CCP12 FISH Probe Kit is designed to detect the human *KRAS* gene located on chromosome band 12p12.1, along with the number of chromosome 12 copies per cell. Abnormal expression or rearrangements of the *KRAS* gene – also known as *K-RAS* or *c-Ki-ras 2* – has been observed in various tumor types such as pancreas, colon and rectum, lung, thyroid, prostate, kidney and others. Aberrations of the gene have also been spotted in acute non lymphocytic leukemia and myelodysplasia.

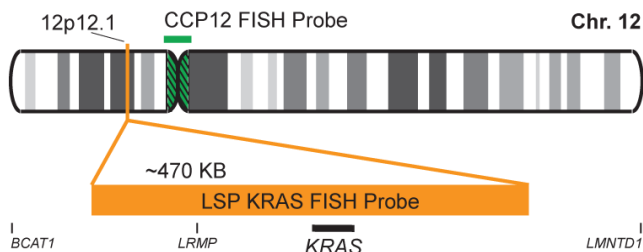

Intended Use

To measure the copy number of the human *KRAS* gene located on chromosome band 12p12.1.

LSP KRAS FISH Probe	CytoOrange CytoGreen
CCP12 FISH Probe	

Probe Design

LSP KRAS FISH Probe covers a chromosomal region which includes the entire *KRAS* gene. CCP12 FISH Probe, derived from chromosome 12-specific alpha satellite DNA, is designed to serve as a control to determine the number of chromosome 12 copies per cell.
