

# ERG Break Apart FISH Probe Kit

## Introduction

The ERG Break Apart FISH Probe Kit is designed to detect rearrangements in the human *ERG* gene located on chromosome band 21q22.2. In addition to revealing breaks, which can lead to translocation of parts of the gene, inversion, or its fusion to other genes, the probe set can also be used to identify other *ERG* aberrations such as deletions or amplifications. Rearrangements and abnormal expression of the *ERG* gene – also known as *p55* or *erg-3* – have been observed in Ewing’s sarcoma, acute myeloid leukemia (AML), prostate cancer and other tumor types.

Intended Use
To detect rearrangements in the human <i>ERG</i> gene located on chromosome band 21q22.2.

Cont.	Color
LSP ERG 5' FISH Probe LSP ERG 3' FISH Probe	CytoGreen CytoOrange

## Probe Design

LSP ERG 5' FISH Probe covers the 5' (start) portion of the *ERG* gene and some adjacent genomic sequences. LSP ERG 3' FISH Probe covers the 3' (end) part as well as sequences downstream of the gene. The two probes are flanking a region in the *ERG* gene in which variable breakpoints have been observed.

Not to Scale

Cat. No.	Volume
CT-PAC151-10-GO	10 Tests (100 µL)

Signal Pattern Interpretation	
<u>Normal Pattern</u> 2OG*	<u>Abnormal Pattern</u> Other Patterns
*Overlapping orange and green signals can appear as yellow.
