

IGH-MAF Fusion/Translocation FISH Probe Kit

Introduction

The IGH-MAF Fusion/Translocation FISH Probe Kit is designed to detect rearrangements involving the human *IGH* locus and *MAF* gene located on chromosome bands 14q32.33 and 16q23.2, respectively. Rearrangements between the two regions have been observed in multiple myeloma and other malignancies.

Intended Use

To detect rearrangements involving the human *IGH* locus and *MAF* gene located on chromosome bands 14q32.33 and 16q23.2, respectively.

Cont.

LSP IGH 5'-3' FISH Probe
LSP MAF FISH Probe

Color

CytoGreen
CytoOrange

Probe Design

Not to Scale

LSP IGH 5'-3' FISH Probe covers the 5' and the center sequences of the *IGH* locus, and it also covers the 3' (end) part and the neighboring downstream region. LSP MAF FISH Probe covers a chromosomal region which includes the entire *MAF* gene. The probe set is optimized to reveal translocations between the two regions.

Cat. No.

CT-PAC310-10-GO

Volume

10 Tests (100 µL)

Signal Pattern Interpretation

Normal Pattern

2O + 2G*

Abnormal Pattern

Other Patterns

*Overlapping orange and green signals can appear as yellow.
