Design your own Pathogen Diagnostic Kit With Discovery Platforms from Agdia

AmplifyRP® Discovery Kits provide all the reagents necessary to amplify DNA at a single operating temperature (39°C) lyophilized into individual reaction pellets. The end-user can then design their own primers and probes for a specific target, mix them with our amplification reagents, and get results (generally in less than 30 minutes). RNA amplification is also possible with the addition of reverse transcriptase.
