Application Notes

Gentamicin Sulfate is an aminoglycoside antibiotic that is effective against many Gram-negative bacteria, e.g., *Brucella*, *Escherichia*, *Enterobacter*, *Francisella*, *Yersinia*, etc., and some strains of staphylococci. It inhibits the initiation, elongation and termination of protein synthesis by binding to the 30S subunit and sometimes the 50S subunit of the bacterial ribosome.² Gentamicin is suitable for plant tissue culture use as it is stable for autoclaving; however, it has been reported that gentamicin inhibits growth of tobacco, *Salpiglossis*, romaine lettuce and artichoke at high concentration ranging from 50 to 100 µg/mL.^{3,4}

Minimum inhibitory concentration (MIC) of gentamicin has been reported for many bacteria. MIC for *Escherichia coli* is 0.05 µg/mL, *Bacteroides* spp. is greater than 128 µg/mL, and *Clostridium* spp. is 112 µg/mL.⁵

Please note: It is the sole responsibility of the purchaser to determine the appropriateness of this product for the specific plants that are being cultured and applications that are being used.
